ZOMBIE VIRTUAL ESCAPE ROOM

Description

A strange genetic mutation has led to a zombie outbreak. You are the leading scientist on gene editing and are the world's last hope! You have 45 minutes to solve the four clues. Good Luck!

ZOMBIE VIRTUAL ESCAPE ROOM

Clue #1

You feared this day would come and it has. Instead of sitting in your apartment waiting to be bitten, you are heading to your lab to work on a cure. To deliver it, you will need to find out where the outbreak started and enter the 3-letter code.

HINT: Think Morse Code.

ZOMBIE VIRTUAL ESCAPE ROOM

Clue #2

Your colleague sent you the DNA sample taken from subject zero. If you can re-sequence their mutated genes you'll be able to create the antidote. Select the five shape sequence that will open the lock.

HINT: You might not use all the shapes.

ZOMBIE VIRTUAL ESCAPE ROOM

Clue #3

You did it! Now you must create the right chemical mixture to reverse the mutations. Hurry—the outbreak is spreading!

97791

HINT: You might have to subtract.

ZOMBIE VIRTUAL ESCAPE ROOM

Clue #4

You successfully created the antidote! But you need to distribute it to key points in the city. Start at your office on Bleeker St and get over to Penn Station where they can help distribute the antidote. Avoid being anywhere near the 1-2-3 line. The subways are safe but outside is still total chaos. Select the five directions (up, down, left, right), that will open the lock. Good luck!

HINT: Visit the circled locations.
